

Get the home financing treatment you deserve as a physician with the **BUYING POWER COMMITMENTSM**

when you take advantage of **The AMA-Sponsored Home Mortgage Program.**

1-800-AMA-4778, ext. 906

Monday through Friday, 8 a.m. to midnight (ET).

Deaf/Hard of Hearing individuals may call

1-800-541-2024 TTY.

- ✓ We will give you a \$150 AMA member bonus after closing through 12/31/96.
- ✓ We will reduce your paperwork.
- ✓ We will give you a loan decision in as little as 24 hours.*
- ✓ We will close your loan in as few as 15 business days after approval, even in the evening or on Saturday.**
- ✓ We will give you buying power in the home you already own with one of our home equity options.

AMA Financing & Practice Services, Inc.
A Subsidiary of the American Medical Association

Prudential Home Mortgage

*Eligibility requirements for 24 hour loan decision include: a 20% down payment, an overall good credit rating and a signed purchase contract. Single-family dwellings only. Condos, Co-ops, second homes and investment properties are excluded. Also, because your loan decision is not subject to an appraisal, you may want to consult your legal advisor to include an appraisal contingency in your purchase contract. Other conditions may apply, such as a maximum loan amount. Call your financing representative for details. Example — 30 year \$100,000 mortgage; Fixed, simple interest rate 8.5%, APR 8.692%, 360 \$768.92 monthly payments. **Not available in all states. The 15-day close is subject to certain conditions. An additional fee applies to Saturday closings. Contact a Prudential Home Mortgage representative for details. Home equity loans are currently being provided by Prudential Home Mortgage or its affiliate, The Prudential Bank. The Prudential Bank means The Prudential Savings Bank, F.S.B., The Prudential Bank & Trust Company or PBT Mortgage Corporation, all of which are subsidiaries of The Prudential Insurance Company of America. The Prudential Savings Bank, F.S.B., The Prudential Bank & Trust Company are members FDIC. Loans subject to credit approval. Certain restrictions apply. Account features, associated rates, fees and charges may differ among geographic regions and may be modified or discontinued. Certain restrictions apply. State availability subject to change. Information in this advertisement is accurate as of date of printing and is subject to change without notice. Buying Power Commitment is a service mark of The Prudential Insurance Company of America. The Prudential Home Mortgage Company, Inc., 8000 Maryland Avenue, Clayton, Missouri is in the business of originating, processing, purchasing, and selling residential mortgage loans secured by liens on real property. The Prudential Home Mortgage Company, Inc. is an affiliate of The Prudential Insurance Company of America, doing business as P.H. Mortgage Company, Inc. in Ohio. New York Office: Expressway Executive Center, Suite 100, 48 South Service Road, Melville, New York 11747. Arizona BK 8408; Florida Licensed Mortgage Lender; Illinois Residential Mortgage Licensee; Licensed Mortgage Banker/New Jersey Department of Banking; Calif. Broker/Lender. All California loans are made pursuant to a California Department of Corporations Consumer Finance Lender license or Commercial Finance Lender license. Equal Housing Opportunity. AMASateAD-3/1/96

Black and Older Hypertensives Are Similar, Yet Different...

...So Are Calcium Channel Blockers.

Before making your therapeutic decision, consider:

- Pathophysiology¹⁻³
- Concomitant conditions²⁻⁵ and
- Concomitant medications.³⁻⁵ **Then...**

Consider Real Clinical and Economic Value

- Demonstrated efficacy in black and older hypertensives⁶⁻⁸
- Once-daily regimen that's well-tolerated and convenient
- Frequency and type of side effects are typical of dihydropyridine calcium channel blockers. The dose-dependent incidence of peripheral edema was 18%-29% vs. 10% for placebo and for headache was 16%-22% vs. 13% for placebo. Flushing/heat sensation, dizziness, and fatigue/asthenia were each reported at an incidence of 4%⁹
- Lower Average Wholesale Price (AWP) than Procardia XL^{®*} or Norvasc^{®*}
—**as much as 26%-29% lower**^{†10}
- Adalat CC is not indicated for angina. It should be taken on an empty stomach. As with all distinct pharmacologic entities, switching from one to another may necessitate careful titration and patient monitoring

Consider

3/95

INDICATION AND USAGE: ADALAT CC is indicated for the treatment of hypertension. It may be used alone or in combination with other antihypertensive agents.

CONTRAINDICATIONS: Known hypersensitivity to nifedipine.

WARNINGS: **Excessive Hypotension:** Although in most patients the hypotensive effect of nifedipine is modest and well tolerated, occasional patients have had excessive and poorly tolerated hypotension. These responses have usually occurred during initial titration or at the time of subsequent upward dosage adjustment, and may be more likely in patients using concomitant beta-blockers.

Severe hypotension and/or increased fluid volume requirements have been reported in patients who received immediate release capsules together with a beta-blocking agent and who underwent coronary artery bypass surgery using high dose fentanyl anesthesia. The interaction with high dose fentanyl appears to be due to the combination of nifedipine and a beta-blocker, but the possibility that it may occur with nifedipine alone, with low doses of fentanyl, in other surgical procedures, or with other narcotic analgesics cannot be ruled out. In nifedipine-treated patients where surgery using high dose fentanyl anesthesia is contemplated, the physician should be aware of these potential problems and, if the patient's condition permits, sufficient time (at least 36 hours) should be allowed for nifedipine to be washed out of the body prior to surgery.

Increased Angina and/or Myocardial Infarction: Rarely, patients, particularly those who have severe obstructive coronary artery disease, have developed well documented increased frequency, duration and/or severity of angina or acute myocardial infarction upon starting nifedipine or at the time of dosage increase. The mechanism of this effect is not established.

Beta-Blocker Withdrawal: When discontinuing a beta-blocker it is important to taper its dose, if possible, rather than stopping abruptly before beginning nifedipine. Patients recently withdrawn from beta blockers may develop a withdrawal syndrome with increased angina, probably related to increased sensitivity to catecholamines. Initiation of nifedipine treatment will not prevent this occurrence and on occasion has been reported to increase it.

Congestive Heart Failure: Rarely, patients (usually while receiving a beta-blocker) have developed heart failure after beginning nifedipine. Patients with tight aortic stenosis may be at greater risk for such an event, as the unloading effect of nifedipine would be expected to be of less benefit to these patients, owing to their fixed impedance to flow across the aortic valve.

PRECAUTIONS: General - Hypotension: Because nifedipine decreases peripheral vascular resistance, careful monitoring of blood pressure during the initial administration and titration of ADALAT CC is suggested. Close observation is especially recommended for patients already taking medications that are known to lower blood pressure (See WARNINGS).

Peripheral Edema: Mild to moderate peripheral edema occurs in a dose-dependent manner with ADALAT CC. The placebo subtracted rate is approximately 8% at 30 mg, 12% at 60 mg and 19% at 90 mg daily. This edema is a localized phenomenon, thought to be associated with vasodilation of dependent arteries and small blood vessels and not due to left ventricular dysfunction or generalized fluid retention. With patients whose hypertension is complicated by congestive heart failure, care should be taken to differentiate this peripheral edema from the effects of increasing left ventricular dysfunction.

Information for Patients: ADALAT CC is an extended release tablet and should be swallowed whole and taken on an empty stomach. It should not be administered with food. Do not chew, divide or crush tablets.

Laboratory Tests: Rare, usually transient, but occasionally significant elevations of enzymes such as alkaline phosphatase, CPK, LDH, SGOT, and SGPT have been noted. The relationship to nifedipine therapy is uncertain in most cases, but probable in some. These laboratory abnormalities have rarely been associated with clinical symptoms; however, cholestasis with or without jaundice has been reported. A small increase (<5%) in mean alkaline phosphatase was noted in patients treated with ADALAT CC. This was an isolated finding and it rarely resulted in values which fell outside the normal range. Rare instances of allergic hepatitis have been reported with nifedipine treatment. In controlled studies, ADALAT CC did not adversely affect serum uric acid, glucose, cholesterol or potassium.

Nifedipine, like other calcium channel blockers, decreases platelet aggregation *in vitro*. Limited clinical studies have demonstrated a moderate but statistically significant decrease in platelet aggregation and increase in bleeding time in some nifedipine patients. This is thought to be a function of inhibition of calcium transport across the platelet membrane. No clinical significance for these findings has been demonstrated. A positive direct Coombs' test with or without hemolytic anemia has been reported but a causal relationship between nifedipine administration and positivity of this laboratory test, including hemolysis, could not be determined.

Although nifedipine has been used safely in patients with renal dysfunction and has been reported to exert a beneficial effect in certain cases, rare reversible elevations in BUN and serum creatinine have been reported in patients with pre-existing chronic renal insufficiency. The relationship to nifedipine therapy is uncertain in most cases but probable in some.

Drug Interactions: Beta-adrenergic blocking agents: (See WARNINGS). ADALAT CC was well tolerated when administered in combination with a beta blocker in 187 hypertensive patients in a placebo-controlled clinical trial. However, there have been occasional literature reports suggesting that the combination of nifedipine and

beta-adrenergic blocking drugs may increase the likelihood of congestive heart failure, severe hypotension, or exacerbation of angina in patients with cardiovascular disease. Digitalis: Since there have been isolated reports of patients with elevated digoxin levels, and there is a possible interaction between digoxin and ADALAT CC, it is recommended that digoxin levels be monitored when initiating, adjusting, and discontinuing ADALAT CC to avoid possible over- or under-digitalization.

Coumarin Anticoagulants: There have been rare reports of increased prothrombin time in patients taking coumarin anticoagulants to whom nifedipine was administered. However, the relationship to nifedipine therapy is uncertain.

Quinidine: There have been rare reports of an interaction between quinidine and nifedipine (with a decreased plasma level of quinidine).

Cimetidine: Both the peak plasma level of nifedipine and the AUC may increase in the presence of cimetidine. Ranitidine produces smaller non-significant increases. This effect of cimetidine may be mediated by its known inhibition of hepatic cytochrome P-450, the enzyme system probably responsible for the first-pass metabolism of nifedipine. If nifedipine therapy is initiated in a patient currently receiving cimetidine, cautious titration is advised.

Carcinogenesis, Mutagenesis, Impairment of Fertility: Nifedipine was administered orally to rats for two years and was not shown to be carcinogenic. When given to rats prior to mating, nifedipine caused reduced fertility at a dose approximately 30 times the maximum recommended human dose. *In vivo* mutagenicity studies were negative.

Pregnancy: Pregnancy Category C. In rodents, rabbits and monkeys, nifedipine has been shown to have a variety of embryotoxic, placental and fetotoxic effects, including stunted fetuses (rats, mice and rabbits), digital anomalies (rats and rabbits), rib deformities (mice), cleft palate (mice), small placentas and underdeveloped chorionic villi (monkeys), embryonic and fetal deaths (rats, mice and rabbits), prolonged pregnancy (rats; not evaluated in other species), and decreased neonatal survival (rats; not evaluated in other species). On a mg/kg or mg/m² basis, some of the doses associated with these various effects are higher than the maximum recommended human dose and some are lower, but all are within an order of magnitude of it.

The digital anomalies seen in nifedipine-exposed rabbit pups are strikingly similar to those seen in pups exposed to phenytoin, and these are in turn similar to the phalangeal deformities that are the most common malformation seen in human children with *in utero* exposure to phenytoin.

There are no adequate and well-controlled studies in pregnant women. ADALAT CC should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus.

Nursing Mothers: Nifedipine is excreted in human milk. Therefore, a decision should be made to discontinue nursing or to discontinue the drug, taking into account the importance of the drug to the mother.

ADVERSE EXPERIENCES: The incidence of adverse events during treatment with ADALAT CC in doses up to 90 mg daily were derived from multi-center placebo-controlled clinical trials in 370 hypertensive patients. Atenolol 50 mg once daily was used concomitantly in 187 of the 370 patients on ADALAT CC and in 64 of the 126 patients on placebo. All adverse events reported during ADALAT CC therapy were tabulated independently of their causal relationship to medication.

The most common adverse event reported with ADALAT CC was peripheral edema. This was dose related and the frequency was 18% on ADALAT CC 30 mg daily, 22% on ADALAT CC 60 mg daily and 29% on ADALAT CC 90 mg daily versus 10% on placebo.

Other common adverse events reported in the above placebo-controlled trials include: Headache (19%, versus 13% placebo incidence); Flushing/heat sensation (4%, versus 0% placebo incidence); Dizziness (4%, versus 2% placebo incidence); Fatigue/asthenia (4%, versus 4% placebo incidence); Nausea (2%, versus 1% placebo incidence); Constipation (1%, versus 0% placebo incidence).

Where the frequency of adverse events with ADALAT CC and placebo is similar, causal relationship cannot be established. The following adverse events were reported with an incidence of 3% or less in daily doses up to 90 mg:

Body as a Whole/Systemic: chest pain, leg pain **Central Nervous System:** paresthesia, vertigo **Dermatologic:** rash **Gastrointestinal:** constipation **Musculoskeletal:** leg cramps **Respiratory:** epistaxis, rhinitis **Urogenital:** impotence, urinary frequency

Other adverse events reported with an incidence of less than 1.0% were:

Body as a Whole/Systemic: cellulitis, chills, facial edema, neck pain, pelvic pain, pain **Cardiovascular:** atrial fibrillation, bradycardia, cardiac arrest, extrasystole, hypotension, palpitations, phlebitis, postural hypotension, tachycardia, cutaneous angiectosis **Central Nervous System:** anxiety, confusion, decreased libido, depression, hypertension, insomnia, somnolence **Dermatologic:** pruritus, sweating **Gastrointestinal:** abdominal pain, diarrhea, dry mouth, dyspepsia, esophagitis, flatulence, gastrointestinal hemorrhage, vomiting **Hematologic/lymphadenopathy:** Metabolic: gout, weight loss **Musculoskeletal:** arthralgia, arthritis, myalgia **Respiratory:** dyspnea, increased cough, rales, pharyngitis **Special Senses:** abnormal vision, amblyopia, conjunctivitis, diplopia, tinnitus **Urogenital/Reproductive:** kidney calculus, nocturia, breast engorgement

The following adverse events have been reported rarely in patients given nifedipine in other formulations: allergic hepatitis, alopecia, anemia, arthritis with ANA (+), depression, erythromelalgia, exfoliative dermatitis, fever, gingival hyperplasia, gynecostasia, leukopenia, mood changes, muscle cramps, nervousness, paranoid syndrome, purpura, shakiness, sleep disturbances, syncope, taste perversion, thrombocytopenia, transient blindness at the peak plasma level, tremor and urticaria.

DOSE AND ADMINISTRATION: Dosage should be adjusted according to each

patient's needs. It is recommended that ADALAT CC be administered orally once daily on an empty stomach. ADALAT CC is an extended release dosage form and tablets should be swallowed whole, not bitten or divided. In general, titration should proceed over a 7-14 day period starting with 30 mg once daily. Upward titration should be based on therapeutic efficacy and safety. The usual maintenance dose is 30 mg to 60 mg once daily. Titration to doses above 90 mg daily is not recommended. If discontinuation of ADALAT CC is necessary, sound clinical practice suggests that the dosage should be decreased gradually with close physician supervision. Care should be taken when dispensing ADALAT CC to assure that the extended release dosage form has been prescribed.

PHYSICIANS WANTED

INTRODUCING TALBERT MEDICAL GROUP

A New Identity

Built upon thirty-five years of experience as FHP Healthcare's physician group, we enjoy a strong legacy of experience, quality and stability. With our new identity and autonomy, we have charted a new course and are establishing ourselves as the premiere independent medical group in the western states, positioned for growth.

Prime Locations Throughout the West

As one of the nation's largest primary care providers, Talbert Medical Group boasts more than 500 dedicated physicians at over 50 advanced medical facilities throughout five western states.

Opportunities in Primary Care

Unlike many of our competitors, Talbert Medical Group has quantifiable data on medical outcomes, accreditations and patient satisfaction, which, combined with our beautiful and convenient medical offices, makes us the better healthcare alternative for patients. We invite you to explore the outstanding opportunities with our group in the locations listed.

Call Talbert Professional Staffing:

A World With Trees...where the trees you plant create cool, quiet neighborhoods

Trees Make a World of Difference™

Trees Make a World of Differ-
ence. Between drab, barren
yards, and cozy, sheltered homes.

Between hot, sunbaked streets,
and cool, shaded neighborhoods
where bird songs fill the air.

Trees Make a World of Differ-
ence. Between smoggy air and
noisy traffic, and clean air and
quiet places to enjoy.

By planting trees, you can in-
crease the value of your property
up to 15% or more. At the same

time, you'll make a personal, pos-
itive contribution to a better en-
vironment.

The trees you plant will remove
carbon dioxide from the air, pro-
duce oxygen, and give wildlife a
home. And trees help conserve
energy. They can lower your
heating bills 10-20%, and cut
cooling costs 15-35%.

Find out how trees can make a
world of difference for you, and
your neighborhood. For your
free brochure write: Trees For
America, The National Arbor
Day Foundation, Nebraska City,
NE 68410.
